Keypad and security door opener available soon: Watch out for our beneficial upgrade offer.

T24: Build A Network Quickly, Easily And Cost Effectively

What does a typical system look like and what kind of cabling is required? The system image shows the schematic structure of an access control system with the T24 including Hemispheric camera, keypad, info module and an additional MOBOTIX security door opener installed inside next to the door.

The T24 network connection and power supply are supplied via an Ethernet cable (PoE technology) or alternatively using the Mx2wire expansion set via a two-wire bell wire. This way, the existing doorbell or simple door intercom system can be replaced by a versatile access control system with a high-resolution MOBOTIX door camera with little extra effort or cost. For more details, see the T24 System Manual (www.mobotix.com > Support > Manuals).

Beneficial MOBOTIX Upgrade Offer

If you order a keypad or security door opener later on, MOBOTIX will deduct the full purchase price of the used Info or IO module you return!

MOBOTIX will let you know as soon as the upgrade offer starts.
